Logan Edmondson

Phone: 859-486-9947 – **Email:** logan.edmondson09@outlook.com – **GitHub:** lmedmo

Summary

Professional with 5+ years of experience in a wide range of fields such as Computer Programming, Systems Engineering/Administration, Process Automation & AI, IT Solutions Consulting and Precision Manufacturing. Certified to perform the duties of an IT Systems Administrator, Network Administrator, Database Administrator/Engineer, Linux Administrator, and IT Security Professional. Graduated on the Dean's List in Spring of 2023 with an Associates of Applied Science in Information Technology, specializing in Computer Programming and Software Development. Solving problems, learning new skills, and building things are my passions. I'm always willing to go the extra step to achieve the best result and to grow as a person, as a professional, and as a teammate. Currently the recipient of a High Public Trust Security Clearance.

Skills & Experience

Programming / Scripting

Software Development Practices:

- Design Patterns and Core Concepts: Solid understanding of fundamental software design patterns and other core development concepts such as object-oriented programming, Model-View-Controller (MVC) architecture, Model-View-ViewModel (MVVM) architecture, the Agile Method, and more.
- Version Control: Experienced using Git (CLI) and Git based tools / services, most notably GitHub, GitLab, GitButler, GitKraken, and Tower. Additional experience with building self-hosted Git / GitLab servers for use with document, media, and code repositories.

Languages:

- Rust – Extensive knowledge of fundamental Rust concepts such as the ownership model, borrowing, the module/crate tree system, error handling, etc. Experience using for full-stack, native, cross-platform (i.e. desktop/mobile) application development built with Tauri (a Rust based app framework). Also, experienced using Cargo package manager and Crates, which include, but are not limited to SQLx (for embedded SQLite / PostgreSQL / DuckDB datastore interfacing), Tokio / Async-Std (for Asynchronous runtimes), Serde (for serialization and deserialization of types), and many more.
- JavaScript / TypeScript – Experience with usage for both front and back-end web application development purposes (in combination with HTML and CSS). Experienced with front-end frameworks such at Svelte (SvelteKit), React and SolidJS, in addition to other web technologies which includes, but is not limited to Node.JS, Deno, Vite, PNPM, REST APIs, Web-sockets, TailwindCSS, and more.
- Java – First language, learned as high-school sophomore (2014). Experience using for cross-platform desktop application development (using JavaFX and SceneBuilder, JVM / JDK) and Android application development. Familiar with using tools such as IntelliJ, Netbeans, Eclipse, Android Studio IDE, VS Code, and others for Java app development.
- PHP – Experience building and deploying WAMP/LAMP stack (Windows/Linux, Apache HTTP Server, MySQL/MariaDB, and PHP) data-driven web applications. Experience and knowledge of related technologies and frameworks such as WordPress and Laravel.
- Python – Experience using Python for automation and data modeling / analysis tasks, such as translating or parsing data between various languages / syntaxes (i.e. CSV, MD, TOML, JSON, YAML, SQL, XML, INI, etc.). Experience using popular libraries such as Tkinter (for building GUIs), BeautifulSoup (for web scraping), and more.
- PowerShell – Experience authoring scripts to automate Windows endpoint and Active Directory related tasks such as modifying user & computer objects, deploying software packages and updates, gathering device metrics and more.
- Others – Bash / Zsh, Go (Golang), C# / .NET, Swift, Nim, and Elixir.

System Administration / Engineering

- Windows Server (2016 - 2025) Administration: Experience with configuring devices running Windows Server as a Domain Controller, WSUS Server, MS SQL Server, DNS Server, DHCP Server, and Configuration Manager Primary Site. Also experienced with creating network drives/shares, managing system backups, setting up RAID, creating drive partitions and logical volumes, configuring BitLocker, etc.
- Active Directory: Experience with creating and managing user accounts, computer objects, Organizational Units, Computer/User Groups, Group Policies (GPOs), and performing other tasks associated with Active Directory Domain Services, such as configuring smart-card authentication, configuring Kerberos policies, changing user passwords and password policies, setting user permissions, using LDAP APIs to enable security features such as MFA and SSO, etc.
- Microsoft 365 Administration: Experience performing administrative tasks related to M365 applications (Teams, Sharepoint, Exchange, PowerApps, etc.) such as enabling or disabling features, managing user permissions, etc.
- Asset management: Experience with optimizing processes relating to the lifecycle of a PC, specifically laptops. This included the acquisition, inventorying, imaging & configuration, deployment, post-deployment tracking and health monitoring, and decommissioning of devices. My role pertained mostly to the creation of an Imaging depot to better facilitate the Inventorying, Imaging/configuration, and deployment phases). Experience involved designing MECM/SCCM Server/Site Hierarchies, along with designing and implementing systems and procedures related to device processing, progress tracking, order/ticket tracking, and quality assurance (For example developing a database for record keeping and gathering metrics, creating process check-sheets and SOPs, implementing a barcode system for updating status, optimizing workstations to improve throughput and maximize capacity, etc.).
- Virtualization testing: Experience using virtual-machines to test system architectures and collect information for determining requirements and making improvements.
- Imaging and System configuration: Experience with using Microsoft Intune (Previously SCCM, then MECM), and the Microsoft Deployment Toolkit (MDT) for Device Management, Configuration, and Security Compliance tasks such as Windows 10 Image creation and deployment, and software packaging and distribution via Configuration Manager Collections.
- Patching: Experience creating, deploying, monitoring, and rolling back software patches or Fixlets using HCL BigFix (IBM BigFix). Additional usage of this tool involved performing multi-action groups, creating baselines, adding/updating registry keys, and scheduling actions for after hours.
- Linux / Unix Administration: Experience that applies to a wide range of distributions (Ubuntu, Fedora, CentOS, Kali, Manjaro, Nix, OpenSUSE, etc.) and includes performing tasks such as OS installation and device imaging, working with the terminal / command-line, writing Bash scripts, managing the filesystem, managing partitions and logical volumes, deploying servers / services and cloud applications, managing system processes, managing Users, managing connected devices such as printers, managing system logs, monitoring system performance, performing system backups and restoration, configuring network connections, managing virtual machines / containers (ex. Docker / Podman), and troubleshooting a multitude of issues.

Network Administration

- Planning: Experience with evaluating the specifications of infrastructure devices (routers, switches, access points, transceivers, racks, cooling, UPSs, cabling options, etc.) to determine appropriate solutions based upon parameters related to a project's defined scope or objectives / requirements.
- Modeling: Experience with creating diagrams of logical and physical network topologies, as well rack diagrams, and using tools such as Cisco Packet Tracer and virtual machines to model and test implementations.
- Implementation: Experience installing and configuring network infrastructure devices (especially those from Cisco, Ubiquiti, Netgate, and Fortinet) that includes, but is not limited to, routers, switches, wireless access-points, firewalls, network controllers (ex. UniFi OS Server or UniFi Network Server), NAS devices, along with a variety of IoT devices.
- Configuring: Experience managing the configuration of network firewalls (UTM and NGFW devices), multilayer switches, and WLAN controllers to implement or enable features such as: Network Segmentation using VLANs, subnetting, and Demilitarized Zones (DMZs); IPv4 (NAT / DHCP) and IPv6 networks; Remote access over RDP or

SSH; Access Control Lists (ACLs); MAC Address Filtering; Application Whitelisting; Rogue Host Protection; PXE (Network) Booting; Port Forwarding; Load Balancing; Intrusion Detection (IDS) & Intrusion Prevention (IPS); Internal DNS and VPNs.

- Monitoring: Experience performing network availability, utilization, and performance scanning/monitoring related tasks such as log analysis and task scheduling (using Event Viewer, the command prompt, and SIEM tools such Splunk), as well as port scanning using Zenmap or nmap.
- Servicing: Experience using a wide range of techniques, tools and methods to identify potential network issues, regardless of where it exists in the 7-Layer OSI Model (i.e. 1-Physical, 2-Data Link, 3-Network, 4-Transport, 5-Session, 6-Presentation, & 7-Application).

Database Design / Administration

- Experience designing, developing, and maintaining relational and NoSQL databases including MySQL/MariaDB, MS SQL, PostgreSQL, SurrealDB, and SQLite, for the purpose of building server-side rendered web apps, deploying Microsoft Endpoint Configuration Management (MECM) Sites and Hierarchies, and creating cross-platform desktop/mobile applications with embedded data stores. Related experience includes exposure to tools like MySQL Workbench, MS SQL Server Management Studio (SSMS), DBeaver and experience implementing custom backend APIs that interface with toolkit libraries (such as SQLx) and other CLIs.

Information Security

- General: Experience and training related to identifying potential threat actors and attack vectors, performing security and risk management assessments, implementing PKI and Identity/Access management, evaluating Physical security, enforcing wireless, cloud, and mobile device security, etc.
- Vulnerability Detection: Experience using vulnerability scanning software like Tenable Nessus and Snort, as well as other relevant tools such as packet sniffers like Wireshark.
- Remediation: Experience using HCL BigFix (IBM BigFix) to generate compliance reports and push vulnerability patches or Fixlets.
- Penetration Testing: Experience which includes performing SQL injections, ARP poisoning, DNS poisoning, SYS Flooding, Man-in-the-Middle attacks using Ettercap, and password cracking using tools like Rainbow Tables and John the Ripper.

Productivity and Project Management

- Management/Leadership: Experience leading teams of 10+ people. Generated and evaluated performance metrics to coordinate objectives that would ensure production goals were met or exceeded. Communicated proactively with peers and other departments, trained new and existing employees, etc.
- Generating Documentation: Experience with developing comprehensive, but understandable documentation to be used as a Standard Operating Procedure (SOP), training resource, or to report research/test findings.

UI/UX and Product Design

- Figma: Experience using Figma's wide selection of tools and features to create a variety of different Icons, documents, and application interface mockups.
- Adobe Creative Cloud: Experience using primarily Photoshop and Illustrator for general photo editing and creating graphical assets useful in UI mockups, branding, diagrams, etc.
- Autodesk: Experience using tools such as AutoCAD and Fusion for generating 3D mockups and prototypes of various items, components, and structures for demonstration purposes and/or production via 3D Printing or CNC cutting.
- Other tools: Experience using and evaluating other tools such as Spline, Affinity Photo, Affinity Designer, Apple Motion, Framer, ProtoPie and Sketch.

Employment

Churchill Downs Inc.

- Role: IT Specialist / Systems Analyst
- Tenure: May 2024 – November 2025

- Salary: $XX,XXX.00 annually – *Will provide upon request*
- Duties / Responsibilities:
  - *Information Gathering and Organization:* Produced scheduled reports and other documentation (SOPs, Asset Inventory updates / audits, Knowledge base contributions, etc.) as requested by the Sr. Director of IT.
  - *Network Administration:* Managed and configured Cisco enterprise switches (Setup / modified VLANs via SSH / Putty, performed tasks using Cisco Call-Manager, etc.). Created and modified existing DHCP reservations from Windows Server DHCP Server application.
  - *Incident Resolution and Root-cause Analysis:* Provided hardware and software maintenance / configuration / repair of a wide range of mobile devices, POS terminals, kiosks, personal computers, workstations, and more.
  - Remote Access and Virtual-Machine Management & Administration: RDP, vSphere, EV Reach, SecureLink, etc.
  - *POS Administration:* Oracle Micros / EMC / Symphony experience which includes POS imaging, configuration, calibration, repair, and administration.
  - *Site-Access and Identity Verification App Administration:* Performed tasks related to access provisioning and de-provisioning for applications such as iTrak, VeriDocs, KeyWatcher, etc.
  - *Gaming-Application Administration:* Provisioned and de-provisioned access, managed permissions / groups, and configured applications such as Oasis 360, Oasis Loyalty, Everi apps (Trilogy, CashClub, Xchange Explorer, XView, etc.), Adept Mobile Dispatch System, etc.
  - *Financial Transaction & Compliance Application Administration:* Provisioned and de-provisioned access, managed permissions / groups, and configured applications such as FABICash / FABITrack, Glory ATM / Cash-Recycler kiosk management, etc.
  - *Business / Enterprise Application Administration:* Provisioned and de-provisioned access, managed permissions / groups, and configured applications such as Microsoft M365, Microsoft Exchange, Ivanti MobileIron, etc.

The Linchpin Group LLC

- Role: IT Specialist / Systems Engineer
- Tenure: October 2022 – July 2023
- Salary: $XX,XXX.00 annually – *Will provide upon request*
- Duties / Responsibilities:
  - *Process Design and System Engineering:* Designed and implemented the processes, systems and infrastructure necessary to support the client (IRS - Criminal Investigation Division) and fulfill the following contract requirements:
    - Establish an 'Imaging Depot' with the capacity to process up to 120 laptops per day (built from the ground up).
    - Produce detailed documentation, reports, and resource material (ie. SOPs, knowledge-base materials, etc.) for a variety of operational initiatives.
    - Optimize and improve asset management systems and processes related to device inventorying, acquisition, and order fulfillment timelines.
  - *System / Endpoint Administration:* Built, Tested, and Deployed Windows 10/11 Images for a variety hardware models using Microsoft SCCM (MECM / Intune).
  - *Security Baseline Enforcement and Vulnerability Remediation / Patching:* Enforced system security-policy compliance within a large network consisting of thousands of endpoints using tools such as HCL BigFix, Tenable, CyberArk, and Forescout.
  - *Application Testing and System Integration (CI/CD):* Coordinated daily with System Administrators and Testing-Team members to conduct application/software package testing to ensure compatibility with the overall system image in production or development at the time.

ABB Optical Group

- Role: Senior / Lead Lab Technician
- Tenure: December 2019 – October 2022
- Salary: $XX,XXX.00 annually – *Will provide upon request*
- Duties / Responsibilities:

- Coordinated personnel, responded to production issues, and assigned tasks to ensure department productivity goals were met or exceeded
- Operated and maintained large high speed, 5-axis CNC machines
- Assembled and performed quality control inspection of optical lenses & eyewear
- Experience using precision optical measurement tools
- Collected and analyzed data regarding product quality and the production rates of the department(s)
- Executed other specific tasks assigned by a supervisor or manager.

Education

High School

- Institution: Boone County High School
- Graduation Date: May 2017 – *Received Diploma June 2, 2017*
- Grade (Cumulative GPA): 3.44

Post-Secondary

- Institution: Gateway Community and Technical College (KCTCS)
- Major: Computer and Information Technology – Computer Programming as focus
- Degree: Associate of Applied Science in Information Technology
- Graduation Date: May 2023 – *Received Credential or Degree on May 16, 2023*
- Grade (Cumulative GPA): 3.33

Certifications

TestOut Security Pro

- Description: Demonstrates ability to perform tasks commonly performed by IT security professionals (Network administrators, Systems administrators and IT security specialists). These tasks include the ability to implement layered security through group policy objects, access control lists, wireless and wired local area network security measures, workstation and mobile device security measures, and maintain security protocols and best practices.

Security Clearance

- Level: High Public Trust
- Description: Indicates no criminal record, illegal drug involvements, financial delinquencies, mental health concerns, alcohol related incidents, civil court actions, misuse of computer systems, or subversive activities for the past seven to ten years.

Gateway / KCTCS Credentials

- Description: Demonstrates possession of the knowledge and skillset needed to earn a CompTIA certification through the completion of coursework designed to prepare for a specific exam / exam-set. The following CompTIA certification preparatory credentials have been earned:
  - A+ Prep Certification
  - Network+ Prep Certification
  - Security+ Prep Certification
  - Linux+ Prep Certification

NOCTI Workforce Competency Credential in Computer Technology

- Description: Demonstrates competency in Professional Standards, Ethics, and Business Practices; General Computer Knowledge and Concepts; Hardware and Software Knowledge; Networking and Data Communications; and Security.

Projects

Programming

Personal Finance App

- Description: A cross-platform Desktop and Mobile app which can calculate budget category spending totals, allow a user to create custom budget plans, allow a user to add transactions easily and on the fly, give the user the ability to view, edit, and perform calculations on their account statement(s), and much more.
- Technologies Used: Tauri (Rust), SvelteKit, JavaScript/TypeScript, SQLite (Embedded).

XAMP Web App

- Description: A simple PHP web app with a MySQL backend datastore, running locally on Apache HTTP Server. This was the final project of my Data Driven Webpages course that I completed as part of my Computer Programming degree in college. The application page hierarchy and interface was provided with the instructions for the project; thus this is mostly a basic demonstration of how to implement Models, Views, and Controllers in PHP. My plan is to eventually experiment with a more advanced example using the same core technologies, but built from the ground up with a custom frontend and the addition of more advanced features (i.e. Implement with Docker, include a frontend JavaScript framework, etc.).
- Technologies Used: Apache HTTP Server, MySQL, PHP, XDebug

Systems

MECM Lab Guide

- Description: This guide walks you through the process of setting up MECM within a Hyper-V virtual machine environment. Additionally, this guide demonstrates essential functions of MECM including creating a Windows 10 images, deploying images, creating software collections and deploying packages.

  "I've been a hiring manager for 12 years now, having been involved in countless interviews, on-boardings, and firings. I couldn't even begin to tell you how many people I've interviewed. With all of that being said, as one hiring manager to another, Logan is legitimately as close to a "Slam Dunk" hire as one can be. I volunteered to write this recommendation for Logan because I value the time I got to spend with him and I am extremely appreciative for his contributions to my team and, more importantly, my own professional career. Moreover, I am genuinely excited to see where Logan takes his talents and his skill sets and I can't wait to witness him make his impact in the tech world."

  "Logan has been an employee of mine for close to 3 years. He has always had a great personality and thought of advancement for himself and what he is doing. He has grown over those years into an adaptable and coachable young man. He has high ambition for his craft, and I feel that he can pursue many fields and have success. He would be a great addition to your team."

Bill Jing

- Relation: Professor, Councilor, Mentor
- Occupation: Software Engineer at Twin Spires

  "I know Logan Edmondson since he started at Gateway because I am his academic advisor and he is a student in many of my classes: such as CIT170, CIT171, CIT155, CIT144, CIT149, CIT249, and CIT253. Based on Logan's grade, attendance, and class participation, I would rate Logan's academic performance in my classes as superior. Logan has a great sense of Computer Information Technology. In my classes, he always delivers excellent assignments and projects. Logan has strong problem-solving skills, and self-learning skills, and always be willing to learn new technologies. Logan has been on the Dean's List for many semesters.Based on my 14 years of teaching experience as a CIT faculty at Gateway, and 15 years of industry experience as a software engineer, I would highly recommend Logan Edmondson. I am confident He will be a great addition to your organization."
